

Coding table

How to read the code column.

For the "application area" axis: Q7 settles the application area as a gate, Q11 and Q12 provide an indication.

For "governance" axis: Q24 and Q25 are averaged into the governance axis together with the complexity level that Q10 to Q16 produce.

An answer marked *descriptive* characterizes the project without moving it. An answer marked *indication* is one the mapping chapter reads as pointing one way. Every question also offers "I am not sure / not decided yet"; it is listed only where it changes something.

QUESTION	ANSWER	AXIS	CODE
Q1 Domain	Process, product, environment, customer, metadata (any)	none	descriptive
Q2 Maturity of processing	Raw, modified, enriched, processed (any)	none	descriptive
Q3 Source	Generated, acquired, customer provided, freely available (any)	none	descriptive
Q4 Privacy	Public, internal, confidential, sensitive (any)	none	descriptive
Q5 Timeframe	Static, up to date, (near) real time (any)	none	descriptive
Q6 Motivation	Economic, social and environmental, cultural	none	descriptive
	Legal (a regulator requires the sharing)	none	descriptive
Q7 Scope (the gate)	Intra-organizational	Application area	in-house
	Same industry, or cross-industry	Application area	cross-company
	Not sure / not decided yet	Application area	both columns stay open, and Q7 is named as the question that would settle it
Q8 Reward	Money, virtual assets, data, service, reputation, none (any)	none	descriptive

QUESTION	ANSWER	AXIS	CODE
Q9 Payment model	Free, fixed, subscription based, usage based, revenue based, hybrid (any)	none	descriptive
Q10 Process maturity	Well defined	Complexity level	settled side
	Still in development	Complexity level	complex side
Q11 Actor involvement	Same organizational hierarchy	Complexity level	settled side
	Independent actors	Complexity level	complex side; also an indication of cross-company, not counted towards the application area unless Q7 is empty
Q12 Stakeholder environment	Internal or existing ecosystem	Complexity level	settled side
	Alignment needed across parties	Complexity level	complex side; also an indication of cross-company, not counted towards the application area unless Q7 is empty
Q13 Data uncertainty	Structures already in use	Complexity level	settled side
	Still to be discovered	Complexity level	complex side
Q14 Data requirements for integration	Known and standardized	Complexity level	settled side
	Different systems and formats	Complexity level	complex side
Q15 Integration demands	A few, all internal	Complexity level	settled side
	Several, across domains	Complexity level	neither side
	Many, including external	Complexity level	complex side
Q16 Transformation challenge	System integration only	Complexity level	settled side
	New structures and roles	Complexity level	complex side

QUESTION	ANSWER	AXIS	CODE
Q10-Q16 taken together	Majority of the answered questions on the complex side	Governance	+1 federated
	Majority of the answered questions on the settled side	Governance	-1 centralized
	Equal numbers on each side, or none of the seven answered	Governance	0
Q17 Infrastructure	Peer to peer	none	descriptive
	Platform based	none	descriptive
Q18 Data storage	Centralized (copied into one place)	none	descriptive
	Distributed (stays at the source)	none	descriptive
	Hybrid	none	descriptive
Q19 Interoperability	Legal	none	descriptive
	Organizational	none	descriptive
	Semantic	none	descriptive
	Technical	none	descriptive
Q20 Access coordination	Agreement based	none	descriptive
	Application based, trust based, open	none	descriptive
Q21 Provision request	On demand, event based, continuous (any)	none	descriptive
Q22 Type of relationship	One-to-one, one-to-many, many-to-one, many-to-many (any)	none	descriptive

QUESTION	ANSWER	AXIS	CODE
Q23 Actor interdependence	Loosely coupled, tightly coupled	none	descriptive
Q24 Data ownership	Transferred (rights of use pass to the receiver)	Governance	-1
	Sovereign (the provider keeps control)	Governance	+1
	Shared (held in common)	Governance	0
	Not sure / not decided yet	Governance	0, and the question is named as one that would settle the result
Q25 Allocation of decision-making authority	A central unit (decides for data it does not own)	Governance	-1
	Decentral units (each party for its own data)	Governance	+1
	Both (a joint body sets common rules, each party decides within them)	Governance	0
	Not sure / not decided yet	Governance	0, and the question is named as one that would settle the result
